DUKE MATHEMATICAL JOURNAL

INDEX, VOLUMES 1-22

1935–1955

	Vol.	Pages
Adams, C. R. and Lewy, Hans. On convergence in length...	1	19– 26
Ader, Olin B. An affine invariant of convex regions.....	4	291– 299
Adkisson, V. W., and MacLane, Saunders. Extending maps of plane Peano continua.....	6	216– 228
Agnew, Ralph Palmer. Abel transforms of Tauberian series..	12	27– 36
——— Abel transforms of Tauberian series and analytic approximation to curves and functions.....	19	131– 138
——— Criteria for completeness of orthonormal sets and summability of Fourier series.....	11	801– 821
——— Equiconvergence of Cesàro and Riesz transforms of series.....	22	451– 460
——— Limits of integrals.....	9	10– 19
——— Linear functionals satisfying prescribed conditions....	4	55– 77
Agnew, R. P., and Hill, J. D. Summability of bounded sequences.....	11	573– 574
Ahlfors, Lars V. Bounded analytic functions.....	14	1– 11
Akutowicz, Edwin J. The third iterate of the Laplace transform.....	15	1093–1132
Albert, A. A. Division algebras over a function field.....	8	750– 762
Albert, George E. Asymptotic forms for a general class of hypergeometric functions with applications to the generalized Legendre functions.....	5	281– 292
Allendoerfer, Carl B. The imbedding of Riemann spaces in the large.....	3	317– 333
Ambrose, Warren. Change of velocities in a continuous ergodic flow.....	8	425– 440
——— Spectral resolution of groups of unitary operators.....	11	589– 595
Ambrose, Warren, Halmos, Paul R., and Kakutani, Shizuo. The decomposition of measures, II.....	9	43– 47
Ambrose, Warren, and Kakutani, Shizuo. Structure and continuity of measurable flows.....	9	25– 42
Amitsur, A. S. Non-commutative cyclic fields.....	21	87– 105
Anderson, Douglas R., and Apostol, T. M. The evalution of Ramanujan's sum and generalizations.....	20	211– 216
Anderson, R. D. Continuous collections of continuous curves.	21	363– 367
——— Monotone interior dimension-raising mappings.....	19	359– 366

	Vol.	Pages
Anderson, R. D., and Klee, V. L., Jr. Convex functions and upper semi-continuous collections	19	349- 357
Anderson, Shirley K. Definite divergence of the conjugate Fourier series	14	803- 805
Ankeny, N. C. Quadratic residues	21	107- 112
Apostol, T. M. Generalized Dedekind sums and transformation formulae of certain Lambert series	17	147- 157
——— Identities involving the coefficients of certain Dirichlet series	18	517- 525
Apostol, T. M., and Anderson, Douglas R. The evaluation of Ramanujan's sum and generalizations	20	211- 216
Arens, Richard. Duality in linear spaces	14	787- 794
——— Representation of *-algebras	14	269- 282
——— Representation of functionals by integrals	17	499- 506
Armstrong, James W. Point systems for Lagrange interpolation	21	511- 516
Arnold, B. H. Topologies defined by bounded sets	18	631- 642
Assadourian, Fred. Intransitive Abelian almost-translation groups of almost-periodic functions	8	518- 524
Astrachan, Max. Studies in the summability of Fourier series by Nörlund means	2	543- 568
Atkinson, F. V. The Riemann zeta-function	17	63- 68
Aubert, Karl Egil. Some characterizations of valuation rings	21	517- 525
Baer, Reinhold. Abelian groups without elements of finite order	3	68- 122
——— Duality and commutativity of groups	5	824- 838
——— Finiteness properties of groups	15	1021–1032
——— Groups with descending chain condition for normal subgroups	16	1- 22
——— Sylow theorems for infinite groups	6	598- 614
Bailey, R. P. Convergence of sequences of positive linear functional operations	2	287- 303
Balachandran, V. K. A mapping theorem for metric spaces	22	461- 464
Ball, B. J. Continuous and equicontinuous collections of arcs	19	423- 433
Ball, Richard William. Dualities of finite projective planes	15	929- 940
Ballou, D. H. Functions representable by two Laplace integrals	2	722- 732
Barnett, I. A., and Reingold, H. Invariants of a system of linear homogeneous differential equations of the second order	6	141- 147
Barone, Henry G. Limit points of sequences and their transforms by methods of summability	5	740- 752

	Vol.	Pages
Barrett, Lida K. Regular curves and regular points of finite order	22	295– 304
Barrow, David F. Expressing a function of three variables in nomograph form	15	433– 437
Bateman, H. Spheroidal and bipolar coordinates	4	39– 50
——— Two systems of polynomials for the solution of Laplace's integral equation	2	569– 577
Bauer, Michael. Über den Führer eines Ringes in algebraischen Zahlkörpern	2	578– 580
Beaumont, Ross A. Rings with additive group which is the direct sum of cyclic groups	15	367– 369
Beckenbach, E. F. Conjugate harmonic functions	10	335– 339
——— Functions having subharmonic logarithms	8	393– 400
——— On subharmonic functions	1	480– 483
——— Remarks on the problem of Plateau	3	676– 681
——— The analytic prolongation of a minimal surface	9	109– 111
Beckenbach, E. F., and Bing, R. H. Conformal minimal varieties	10	637– 640
Beckenbach, E. F., and Hahn, J. W. Triples of conjugate harmonic functions and minimal surfaces	2	698– 704
Beckenbach, E. F., and Reade, Maxwell. Regular solids and harmonic polynomials	12	629– 644
Beckenbach, E. F., Seidel, W., and Szász, Otto. Recurrent determinants of Legendre and of ultraspherical polynomials	18	1– 10
Beesley, E. M., and Morse, A. P. φ-Cantorian functions and their convex moduli	12	585– 619
Begle, Edward G. Regular convergence	11	441– 450
Bell, E. T. A type of inversion of certain series	15	79– 85
——— Certain ternary cubic arithmetical forms	3	289– 293
——— Parametric solutions of certain Diophantine equations	9	431– 435
——— Polynomials on a finite discrete range	10	33– 47
Bell, P. O. A new approach to the study of contact in the projective differential geometry of surfaces	18	689– 695
——— A theorem of Cartan	17	453– 455
——— A theorem on generalized conjugate nets in projective n-space	21	323– 327
——— Covariant configurations related to analytic curved surfaces	4	590– 599
——— Power series developments for the equations of a general analytic variety in hyperspace	15	207– 218
——— Projective differential invariants of a curve of a surface	18	697– 705
——— The first canonical pencil	5	784– 788
Bellman, Richard. A generalization of a Zygmund-Bernstein theorem	10	649– 651

	Vol.	Pages
——— A note on the summability of formal solutions of linear integral equations	17	53– 55
——— A stability property of solutions of linear differential equations	11	513– 516
——— Almost periodic gap series	10	641– 642
——— An analog of an identity due to Wilton	16	539– 545
——— An integral inequality	10	547– 550
——— Boundedness of the solutions of second order linear differential equations	22	511– 513
——— Convergence of non-harmonic Fourier series	10	551– 552
——— Fourier integrals	10	247– 248
——— Limit theorems for non-commutative operations. I	21	491– 500
——— Ramanujan sums and the average value of arithmetic functions	17	159– 168
——— Some applications of the Fourier integral to generalized trigonometric series	11	703– 713
——— Some properties of summation kernels	15	1013–1019
——— The boundedness of solutions of infinite systems of linear differential equations	14	695– 706
——— The boundedness of solutions of linear differential equations	14	83– 97
——— The Dirichlet divisor problem	14	411– 417
——— The interation of power series in two variables	19	339– 347
——— The stability of solutions of linear differential equations.	10	643– 647
——— Wigert's approximate functional equation and the Riemann zeta-function	16	547– 552
Bellman, Richard, and Shapiro, Harold N. The algebraic independence of arithmetic functions (I). Multiplicative functions	15	229– 235
——— The distribution of squarefree integers in small intervals.	21	629– 637
Bergman, S., and Schiffer, M. A representation of Green's and Neumann's functions in the theory of partial differential equations of second order	14	609– 638
——— Kernel functions in the theory of partial differential equations of elliptic type	15	535– 566
Bergman, Stefan. Classes of solutions of linear partial differential equations in three variables	13	419– 458
——— Functions satisfying certain partial differential equations of elliptic type and their representation	14	349– 366
——— Solutions of linear partial differential equations of the fourth order	11	617– 649
——— The approximation of functions satisfying a linear partial differential equation	6	537– 561

	Vol.	Pages
Bergman, Stefan, and Martin, W. T. A modified moment problem in two variables	6	389– 407
Bergman, Stefan, and Spencer, D. C. A property of pseudo-conformal transformations in the neighborhood of boundary points	9	757– 762
Berkovitz, Leonard D. Double Sturm-Liouville expansions	19	567– 574
Berkovitz, Leonard D., and Gosselin, Richard P. Restricted summation and localization of double trigonometric series	22	243– 251
Bernard, Richard R. Probability in dynamical transformation groups	18	307– 319
Bernardi, S. D. A survey of the development of the theory of schlicht functions	19	263– 287
——— Two theorems on schlicht functions	19	5– 21
Bernstein, B. A. Groups and Abelian groups in terms of negative addition and negation	5	871– 874
——— Weak definitions of field	14	475– 482
Bernstein, B. A., and Foster, Alfred L. Symmetric approach to commutative rings, with duality theorem: Boolean duality as special case	11	603– 616
Bernstein, Dorothy L. The double Laplace integral	8	460– 496
Beurling, Arne. Some theorems on boundedness of analytic functions	16	355– 359
Bing, R. H. A homogeneous indecomposable plane continuum	15	729– 742
——— Extending a metric	14	511– 519
——— Snake-like continua	18	653– 663
Bing, R. H., and Beckenbach, E. F. Conformal minimal varieties	10	637– 640
Birkhoff, G. D., and Hestenes, M. R. Generalized minimax principle in the calculus of variations	1	413– 432
——— Natural isoperimetric conditions in the calculas of variations	1	198– 286
Birkhoff, Garrett. An extended arithmetic	3	311– 316
——— Generalized arithmetic	9	283– 302
——— Orthogonality in linear metric spaces	1	169– 172
——— Rings of sets	3	443– 454
——— The mean ergodic theorem	5	19– 20
Bissenger, B. H., and Herzog, F. A generalization of Borel's and F. Bernstein's theorems on continued fractions	12	325– 334
——— An extension of some previous results on generalized continued fractions	12	655– 662
Blackman, Jerome. The inversion of solutions of the heat equation for the infinite rod	19	671– 682
Blackwell, David. A renewal theorem	15	145– 150

	Vol.	Pages
Blair, Robert L. Stone's topology for a binary relation	22	271– 280
Block, I. Edward. The Plemelj theory for the class Λ^* of functions	19	367– 378
Block, W. E., and Simmons, H. A. Classes of maximum numbers associated with certain symmetric equations in n reciprocals. III	2	317– 339

The Duke Mathematical Journal is published quarterly under the auspices of Duke University by Duke University Press at Durham, North Carolina. It is printed at 1407 Sherwood Avenue, Richmond, Virginia, by The William Byrd Press.

Charges are as follows: current subscription, the United States, Canada, and the Pan-American countries, ten dollars per year, post paid; all other countries—sixty cents a year additional for postage. Back volumes, as available, are eleven dollars each, carriage extra; single numbers, three dollars. Individuals wishing to enter a current subscription at a reduced rate should write to the Managing Editor, 4785 Duke Station. Other subscriptions, all orders for individual numbers or back volumes, and notices of change of address should be sent to Duke University Press, 6697 College Station, Durham, North Carolina.

The American Mathematical Society is officially represented on the Editorial Board by Professors R. H. Fox and I. E. Segal.
